Generation Next Wading Boots

Wider construction of the boots that includes space for a thick neoprene sock provides greater comfort even if you choose to wear an extra pair of woolly socks.

Rubber sole adapted to screwed in studs.

Inside part of sole additionally reinforced with 4 mm hard rubber - in place where studs go in.

Special construction of tongue to put the boot on easily.

The inside of boots padded with soft fabric for better comfort.

Natural leather coated with agents that improve lastingness.

Synthetic leather selected for long use during wading

Brushed rubber in places particularly exposed to rocks for better durability.

The platform - mid sole is made out of a light and flexible material. Due to the flexibility of the used material the sole have better contact with the river floor, providing a better grip.

The tip of the sole is folded out for better toe protection, additionally stitched for longer durability.

The toe cap can endure a pressure of 150 kg. Reinforced with a special plastic toe cap, protect toes. The tip of the boot doesn't bend under water pressure.

Rubber sole

Special rubber mix selected for wading on slippery surfaces. The shape of the sole based on honeycomb provides the possibility of screwing the appropriate number of studs according to fishing conditions. Mounted studs protrude high, thus providing a good grip while wading.
